PROFILE

I am a skilled software developer with expertise in the MERN stack and strong problem-solving abilities. Experienced in building scalable web applications, I am passionate about delivering efficient and innovative solutions while staying updated with the latest technologies.

WORK DEMO

BurgerBuilder

A flexible food ordering application. The application offers customer to choose items and quantity before ordering their food.

- UI designed using **ReactJS**.
- **Redux** is been applied to manage states centrally
- **Express JS** is implemented to create a backend API which communicates with **MongoDB** database to store data.
- **SSLCommerz** is integrated as a payment gateway.
- Securely managed restricted data and features with **JWT Authentication**.

Ecommerce Project

An online business platform which provides standard, secure and user friendly solution.

- **MERN** based web application.
- Admin panel is integrated to manage products.
- **Flexible backend api** to provide more control over filter and ui.
- SSLCommerz payment gateway integrated.
- Securely handled user data and other information.
